Proposal 1: VoltStream Plumbing and Electrical (Pty) Ltd

1. Organisation Overview

Name: VoltStream Plumbing and Electrical (Pty) Ltd.

VoltStream is a small family-run plumbing and electrical business in Sandton. It began in 2011 when Zanele Mthembu, a qualified plumber, left her contracting job for weekend call-outs from her bakkie. Word of mouth did the rest: an electrical team in 2016, a Randburg branch in 2020, and a 24/7 emergency line today. (Fictional organisation, realistic details.)

Mission: to keep homes and businesses safe, powered and flowing through honest, fast and clearly priced work.

Vision: to be the plumbing and electrical company people in Gauteng actually recommend to their neighbours.

Target audience: homeowners, body corporates and small businesses around Sandton, Randburg, Fourways, Bryanston and Midrand.

2. Website Goals and Objectives

The site has to bring in quote requests, build trust, push the 24/7 emergency line and help people find the company on Google. The numbers to watch:

- at least 20 quote requests a month by month 3;
- 60% of enquiries turning into bookings;
- 10+ emergency call-outs a month from the website;
- first-page Google results for five local search terms by December 2026;
- home page bounce rate under 45%.

3. Current Website Analysis

VoltStream has no website yet - just Facebook reviews and word of mouth. The reviews are good, but the business is invisible in Google searches, prices are never explained in writing, and after-hours callers sometimes get a voicemail instead of a person. The website fixes all three.

4. Proposed Website Features and Functionality

Five pages sharing one navigation menu:

- Home (index.html): hero image, three service cards, customer reviews and a quote button;
- About Us (about.html): story, mission, vision, values and team;

- Services (services.html): service list, maintenance-plan pricing table, areas covered;
- Enquiry (enquiry.html): a quote request form;
- Contact (contact.html): numbers, hours and both branches with embedded maps.

JavaScript form validation comes in Part 3.

5. Design and User Experience

Deep blue (#0B4F8A) for trust, bright orange (#F5A623) for the emergency side, off-white (#F7F9FB) backgrounds. Aptos body text with bold headings. Mobile-first, card-based layout - most emergency calls come from phones. A quote is never more than two clicks away, and alt text with AA contrast is planned throughout.

Home page wireframe:

Low-fidelity wireframe - VoltStream homepage (index.html)

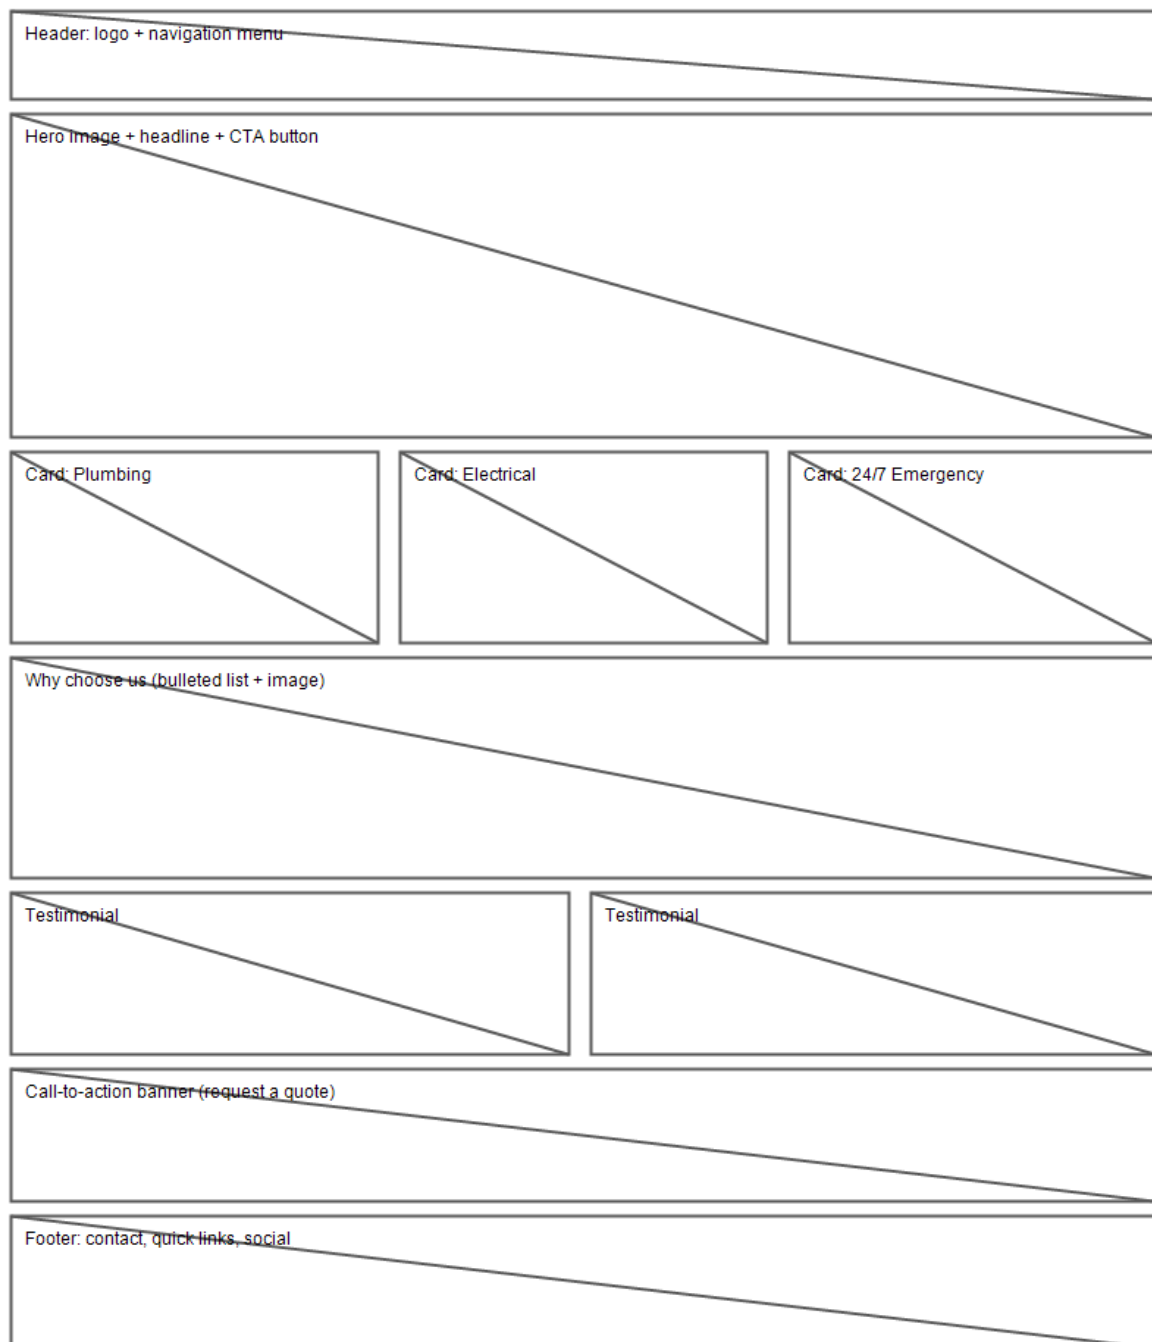

Figure 1: Low-fidelity wireframe of the VoltStream home page.

6. Technical Requirements

- HTML5, CSS3 and JavaScript - no framework needed for a site this size;
- shared hosting with SSL; domain voltstream.co.za;
- Git with a private GitHub repository;
- a Google Business Profile for local SEO.

7. Timeline and Milestones

- 28 Aug 2026: proposals submitted for approval;
- 4 Sep 2026: Part 1 due (HTML structure, folders, repository);
- 25 Sep 2026: Part 2 due (CSS, responsive design);
- 30 Oct 2026: Part 3 due (JavaScript, SEO);
- 6 Nov 2026: final site submitted.

8. Budget

Current South African prices were used as a guide:

- domain (.co.za): R99 a year;
- hosting with SSL: R149 a month (R1,788 a year);
- a freelancer would charge about R18,000 for this build - the student project costs the client nothing;
- logo refresh: R1,500 once-off;
- maintenance R600 a month; SEO support R1,200 a month;
- year one: roughly R24,800, excluding paid ads.

Proposal 2: Paws of Hope Animal Shelter (NPO)

1. Organisation Overview

Name: Paws of Hope Animal Shelter.

Paws of Hope is a small no-kill shelter in Randburg run almost entirely by volunteers. It opened in 2015 when a few friends started fostering strays from their homes; since then it has rehomed more than 400 dogs and cats with the help of about 30 foster families. Donations, adoption fees and fundraisers keep the doors open. (Fictional organisation, realistic details.)

Mission: to rescue, rehabilitate and rehome abandoned animals, and to teach people about responsible pet ownership.

Vision: a Gauteng where every adoptable animal finds a home.

Target audience: people looking to adopt or foster, volunteers, companies searching for CSI projects, schools and donors.

2. Website Goals and Objectives

The website has to convert three groups of visitors: adopters, volunteers and sponsors. The numbers to track are:

- 8 or more adoption applications a month;
- 15 new volunteer sign-ups a month;
- R15,000 a month in recurring donations by month 6;
- 200 newsletter subscribers by December 2026;
- 3 corporate sponsorship enquiries a quarter.

3. Current Website Analysis

The shelter only uses Instagram and Facebook today. The adoption stories work well, but there is no adoption process online, no single page for donations or volunteering, and common questions end up buried in comments. A website gives each of those a permanent home.

4. Proposed Website Features and Functionality

Five pages, one menu:

- Home (index.html): mission statement, three action cards (Adopt, Volunteer, Sponsor), success stories;
- About Us (about.html): the shelter's story, mission and people;

- Adopt (services.html equivalent): adoption steps, what adoption includes, animal gallery;
- Enquiry (enquiry.html): one form for adopting, volunteering or sponsoring;
- Contact (contact.html): details and two locations (Randburg shelter, Sandton adoption venue), each with a map.

Donation buttons (PayFast or SnapScan) and form validation are planned for Part 3.

5. Design and User Experience

Warm teal (#2E8B7A), soft amber (#F2B705) and cream (#FBF7EF) - calm, not corporate.

Rounded headings with Aptos body text. Story-first layout with big animal photos, three action cards and breathing room; mobile-first because most visitors come from social media.

Adoption enquiries within three clicks; descriptive alt text throughout.

Home page wireframe:

Low-fidelity wireframe - Paws of Hope homepage (index.html)

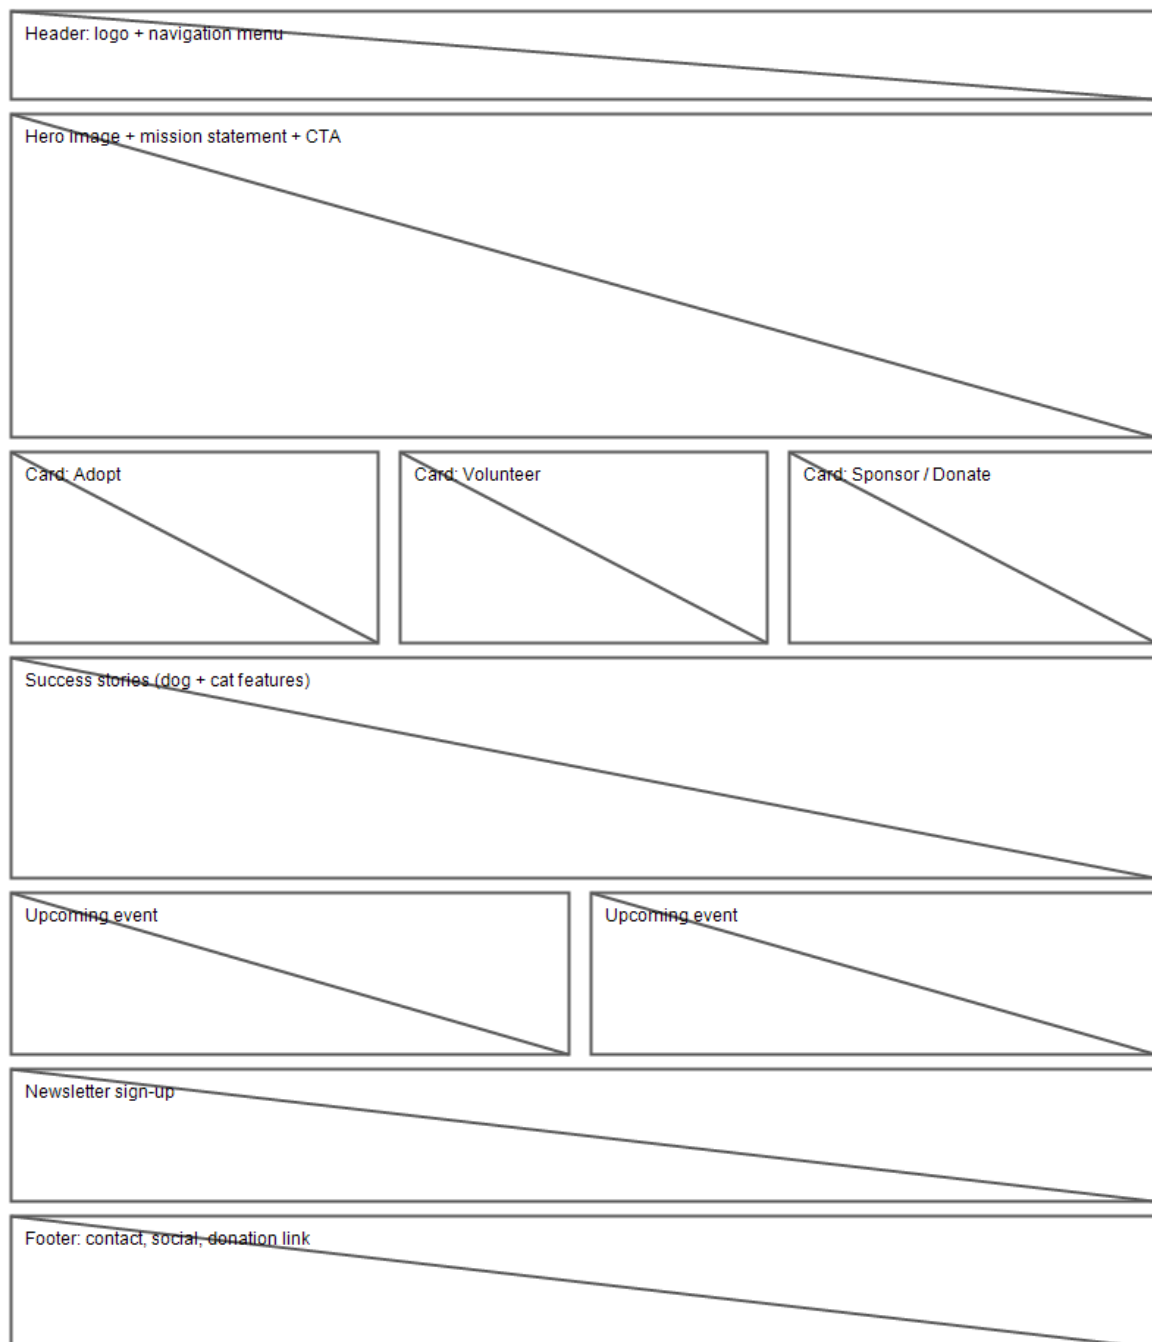

Figure 2: Low-fidelity wireframe of the Paws of Hope home page.

6. Technical Requirements

- HTML5, CSS3 and JavaScript - a static site keeps costs low;
- shared hosting with SSL and a .org.za domain;
- Google for Nonprofits is worth applying for - free Workspace and Ad Grants;
- Git with a private GitHub repository;
- PayFast or SnapScan buttons for donations (Part 3).

7. Timeline and Milestones

- 28 Aug 2026: proposals submitted for approval;
- 4 Sep 2026: Part 1 due (HTML structure, folders, repository);
- 25 Sep 2026: Part 2 due (CSS, responsive design);
- 30 Oct 2026: Part 3 due (JavaScript, donation integration);
- 6 Nov 2026: final site submitted.

8. Budget

Kept deliberately low, as it should be for an NPO:

- domain (.org.za): R75 a year;
- hosting with SSL: R99 a month (R1,188 a year);
- development would cost about R15,000 commercially - the shelter gets it free as a student project;
- professional photos of the animals: R2,000 once-off;
- maintenance R300 a month; payment providers take about 3% of donations;
- year one: roughly R7,000 plus payment fees.
